

Phlebotomy

Phlebotomists play an important role in healthcare by collecting blood samples used for testing, diagnosis, and treatment. They ensure that specimens are collected safely, handled properly, and delivered accurately for laboratory analysis.

In this program, you'll learn proper blood collection techniques, safety procedures, and how to handle and transport specimens without contamination. Training includes in-person instruction followed by a supervised internship to provide real-world experience in a healthcare setting.

If you are detail-oriented, comfortable working with patients, and interested in a hands-on healthcare role, this program can help you get started.

We're here to answer your questions and help you take the next step towards your healthcare career. Contact us for program start dates, schedules, admission requirements, program-specific requirements and additional information.

Program Length: 8 weeks
followed by 50 internship hours

Program Cost: \$1,806
Some programs require additional expenses that may include background clearances, health documentation, uniforms, supplies, certification exams, and other program-specific requirements.
